

OmniDental SaaS Business Plan

Automated Patient Lifecycle Management for High-Growth Orthodontic Practices

1. Executive Summary

OmniDental is a high-growth SaaS platform engineered to solve the most critical operational bottlenecks in orthodontic practices: patient attrition and front-desk administrative overload. By automating the high-touch recall loop and integrating real-time insurance verification, we empower orthodontists to maximize their chair time utilization. At a price point of \$499/month, OmniDental provides a high-ROI solution that pays for itself by capturing even one additional lost patient per month. With a targeted North American total addressable market of 2,000+ high-performing clinics, our mission is to become the operational backbone of modern orthodontic practice management, effectively automating the conversion of passive leads into billable treatment plans.

KEY STRATEGIC TAKEAWAY: *OmniDental captures lost revenue for orthodontists through automated lifecycle management, offering a 10x ROI for clinics.*

2. Problem Statement & Market Friction

Orthodontic clinics suffer from 'leaky funnel' syndrome, where patients frequently drop off during the multi-year treatment lifecycle due to manual scheduling gaps and forgotten follow-ups. Front-desk staff are currently burdened by repetitive administrative tasks, primarily manual SMS reminders and tedious insurance eligibility verification calls, which distract from patient-facing interaction. These inefficiencies lead to significant revenue leakage. An average orthodontic practice loses 10-15% of its potential recurring revenue simply due to poor recall execution and unverified insurance denials. Current practice management software is often legacy-based, lacking the intelligent, automated communication layer required to drive patient compliance and attendance.

KEY STRATEGIC TAKEAWAY: *Revenue leakage in orthodontics is primarily caused by manual scheduling friction and stagnant patient recall processes.*

3. Solution & Value Proposition

OmniDental integrates directly with existing practice management systems (PMS) to provide a unified 'Auto-Pilot' layer. Our core feature set includes: (1) Smart-Recall Engine—an intelligent SMS/Email system that triggers personalized follow-ups based on treatment milestones; (2) Automated Insurance Eligibility Verification—real-time API calls to payers to eliminate claim denials before the patient arrives; and (3) Two-Way Scheduling—a self-serve booking interface for patients that syncs directly with the orthodontist's chair calendar. By removing the manual element from patient management, OmniDental transforms the front desk from an administrative center to a patient-experience center, directly correlating with increased chair utilization and reduced no-show rates.

KEY STRATEGIC TAKEAWAY: *Our solution replaces manual administrative overhead with intelligent automation that actively prevents patient drop-off.*

4. Target Market & Ideal Customer Profile (ICP)

Our ICP is the mid-sized private orthodontic practice (or small-to-mid-sized DSOs) with 2–5 chairs and annual revenues between \$1M and \$3M. These clinics have the highest urgency for operational efficiency as they typically operate without large administrative back-office support. Geographically, we are targeting high-growth North American suburban markets where competition for orthodontic treatment is aggressive, necessitating a superior patient experience. These practices value predictability, high lifetime value (LTV) per patient, and are increasingly willing to adopt cloud-native SaaS tools to maintain a competitive edge.

KEY STRATEGIC TAKEAWAY: *Focus on private orthodontic practices with 2-5 chairs seeking to scale revenue without adding headcount.*

5. Business & Revenue Model (Pricing & Unit Economics)

OmniDental operates on a B2B SaaS subscription model at \$499 per month per practice location. This flat-rate pricing strategy ensures a low barrier to entry and positions our software as an essential operating expense rather than a variable cost. Given an average patient lifetime value in orthodontics exceeding \$5,000, OmniDental's subscription cost is negligible relative to the potential revenue recovered from just one single retained patient. Our lean cost structure, driven by automated onboarding and standardized API integrations, allows for high gross margins (80%+) once the initial PMS integration connectors are built.

KEY STRATEGIC TAKEAWAY: *A \$499/mo subscription provides massive ROI, enabling quick adoption and long-term customer retention.*

6. Go-To-Market (GTM) Strategy & Outbound Pipeline

Our GTM strategy centers on high-velocity outbound and strategic partnerships. Phase 1 focuses on cold outreach via LinkedIn and email to orthodontic office managers and lead orthodontists, utilizing industry-specific value props. We will layer in a referral channel by partnering with orthodontic consultants and dental equipment vendors who have existing relationships with our ICP. By demonstrating our ability to increase patient show-rates by 20% in the first 90 days, we will create a data-backed case study library that serves as our primary outbound sales enablement collateral, moving from direct outreach to a content-driven acquisition loop.

KEY STRATEGIC TAKEAWAY: *Use high-intent outbound targeting combined with referral partnerships to build rapid, low-CAC pipeline.*

7. Competitive Advantage & Strategic Moats

OmniDental's moat is built on 'sticky' integration and data-driven patient conversion. Unlike generic appointment reminders, our recall engine is specifically tuned to the orthodontic patient lifecycle (e.g., bracket adjustments, scan intervals). As we collect more data on patient engagement, we will develop proprietary 'conversion intelligence' that predicts patient risk of drop-off, allowing clinics to proactively intervene. Once integrated into the core PMS workflow, switching costs become high, creating a sustainable barrier against generic competitors and enabling long-term platform loyalty.

KEY STRATEGIC TAKEAWAY: *Proprietary orthodontic-specific patient conversion data creates a defensive moat that standard CRM tools cannot replicate.*

8. Financial Overview & Milestone Projections

We are focused on a disciplined 12-month trajectory to scale from initial product-market fit to a \$1.5M ARR run rate. Stage 1 focuses on securing the first 10 beta clinics to prove ROI and product stability. Stage 2 scales the acquisition engine using lessons from early adopters. Stage 3 pivots to optimized retention and expansion into larger DSOs. We expect CAC to decrease as our brand reputation strengthens and referral volume increases. The objective is to achieve unit economic stability by month 6, allowing for aggressive reinvestment into marketing and engineering to defend our market position.

KEY STRATEGIC TAKEAWAY: *Aggressive scaling strategy designed to achieve \$1.5M ARR within 12 months with high unit profitability.*

Strategic Milestones & Financial Projections

Metric	Stage 1 (Mo 1-3)	Stage 2 (Mo 4-6)	Stage 3 (Mo 7-12)
Active Practices	10	75	250
Monthly Recurring Revenue (MRR)	\$4,990	\$37,425	\$124,750
Customer Acquisition Cost (CAC)	\$1,200	\$950	\$700
Churn Rate	< 2%	< 1.5%	< 1%
