

SolarGrid AI Business Plan

Commercial Rooftop Solar Intelligence & Qualified Lead Pipeline Platform

1. Executive Summary

SolarGrid AI is a high-precision commercial solar lead generation platform that replaces manual, guesswork-heavy prospecting with automated geospatial intelligence. By leveraging satellite and drone-derived rooftop data, we provide solar installers with pre-qualified, high-intent opportunities, drastically reducing their cost per acquisition in the \$150k+ commercial segment. We are positioning ourselves as the 'intelligence layer' between raw aerial data and enterprise sales teams. Our core mission is to catalyze the energy transition by enabling commercial solar installers to skip the cold-calling phase and focus exclusively on closing high-value, feasibility-confirmed deals.

KEY STRATEGIC TAKEAWAY: *SolarGrid AI bridges the gap between raw data and high-conversion commercial solar sales through automated, feasibility-vetted lead pipelines.*

2. Problem Statement & Market Friction

Commercial solar installers currently face extreme friction in customer acquisition. Sales teams spend weeks manually vetting rooftops, calculating shading, and assessing structural feasibility via Google Earth or disjointed third-party reports. This inefficiency leads to a high lead rejection rate and massive sales overhead. The core market friction is the lack of 'intelligence-ready' prospects. Installers spend more time analyzing bad roofs than selling good ones, resulting in bloated sales cycles and diminished ROI on marketing spend. The industry is currently fragmented, with no dominant player delivering turnkey, high-intent commercial leads derived from deep-learning rooftop analytics.

KEY STRATEGIC TAKEAWAY: *The current manual vetting process is inefficient, costly, and prevents solar installers from scaling their \$150k+ average contract value portfolios.*

3. Solution & Value Proposition

SolarGrid AI utilizes proprietary computer vision algorithms to analyze roof geometry, shading, orientation, and obstruction data from satellite and drone imagery. We turn raw roof specs into a 'Solar Feasibility Score' that immediately signals to an installer which commercial properties are prime for conversion. Our value proposition is simple: we provide 'warm' leads that have been pre-validated for technical feasibility, ensuring that the installer's team is only talking to property owners who have both the physical capacity and the logical financial incentive for solar adoption. This transforms the sales process from a discovery mission into a closing consultation.

KEY STRATEGIC TAKEAWAY: *We provide a 'Sales-Ready' lead score that eliminates technical vetting time, allowing installers to focus on closing contracts rather than gathering data.*

4. Target Market & Ideal Customer Profile (ICP)

Our primary target market consists of mid-to-large scale commercial solar EPC (Engineering, Procurement, and Construction) firms and specialized commercial solar brokers. These entities focus on projects with deal sizes exceeding \$150,000. Our Ideal Customer Profile (ICP) is the VP of Sales or Marketing at a commercial solar firm, typically operating in states with high utility rates (e.g., California, New York, Texas, Massachusetts). They are currently frustrated by the low quality of leads purchased from generic lead aggregators and have the budget to pay for highly qualified, pre-vetted project intelligence.

KEY STRATEGIC TAKEAWAY: *We target mid-market commercial solar EPCs who prioritize high-conversion lead quality over low-cost volume.*

5. Business & Revenue Model (Pricing & Unit Economics)

Our revenue model is a hybrid SaaS-plus-Per-Lead structure designed to align our success with our clients'. We charge a \$1,500 monthly platform subscription fee, which provides access to our lead dashboard and analytics tools. Each qualified lead delivered carries a \$150 transaction fee. This model creates a recurring revenue base that covers our operational costs while providing significant upside during high-growth periods. The unit economics are robust, as our cost to generate a data-vetted lead is significantly lower than the \$150 charge, allowing for healthy EBITDA margins as we achieve economies of scale in data processing.

KEY STRATEGIC TAKEAWAY: *A dual-stream revenue model ensures predictable recurring revenue from SaaS fees and variable upside through high-intent lead delivery.*

6. Go-To-Market (GTM) Strategy & Outbound Pipeline

Our GTM strategy focuses on 'account-based' outbound prospecting within the commercial solar sector. We will build direct relationships with commercial EPC sales leaders through targeted LinkedIn outreach, industry conference sponsorship, and co-marketing partnerships with solar CRM providers. Once an installer is onboarded, we perform a 'feasibility audit' on their existing target territories. This proves our value immediately, creating a 'land and expand' strategy where successful initial lead packages lead to enterprise-wide adoption of our platform. We aim to become the exclusive lead source for our premium partners within the first 6 months of the contract.

KEY STRATEGIC TAKEAWAY: *We will leverage direct outbound sales to commercial EPC leaders and build 'data-audits' as our primary conversion tool for new accounts.*

7. Competitive Advantage & Strategic Moats

Our primary moat is our proprietary data-processing pipeline that translates geospatial imagery into 'Sales-Ready' insights. As we process more roofs, our computer vision models become more accurate at identifying structural anomalies and solar-specific hurdles, creating a 'data network effect.' Furthermore, our integration with CRM platforms means we are embedded in the installer's daily workflow. Switching away from SolarGrid AI would require the customer to revert to inefficient manual processes, creating a high barrier to exit. We are not just selling data; we are selling the infrastructure for their commercial sales operation.

KEY STRATEGIC TAKEAWAY: *Our technical moat is built on proprietary AI roof analytics; our business moat is embedded deep-workflow integration.*

8. Financial Overview & Milestone Projections

Our financial strategy prioritizes aggressive customer acquisition in the first 12 months to achieve industry dominance. In Stage 1, we focus on proving the model with 10 high-value partners. By Stage 3, we move to a high-volume scale, supporting over 120 installers. Revenue will be reinvested into advanced AI R&D;, specifically adding multi-sensor data fusion (LiDAR/thermal) to provide even more granular feasibility scores. This investment will defend our premium pricing and ensure our leads remain the gold standard in the commercial solar market.

KEY STRATEGIC TAKEAWAY: *Financial milestones focus on rapid account growth while maintaining a disciplined CAC-to-LTV ratio to ensure sustainable long-term scaling.*

Strategic Milestones & Financial Projections

Metric	Stage 1 (Mo 1-3)	Stage 2 (Mo 4-6)	Stage 3 (Mo 7-12)
Active SaaS Subs	10	40	120
Lead Volume (Mo)	50	250	800
Monthly Recurring Rev	\$22.5k	\$97.5k	\$300k
Customer Acquisition Cost	\$3,000	\$2,200	\$1,800
