

SolarGrid AI: Commercial Rooftop Solar Prospecting Platform

Transforming geospatial roof data into high-intent revenue for commercial solar EPCs.

1. Executive Summary

SolarGrid AI is a high-precision lead generation engine engineered for commercial solar installers. By leveraging computer vision and satellite/drone imagery, we identify commercial rooftops with optimal solar yield and high energy usage patterns. We replace manual, low-conversion canvassing with automated, data-backed intelligence, selling a subscription-based platform that provides installers with pre-qualified, high-intent commercial leads. The platform targets the \$150k+ average deal size segment, positioning SolarGrid AI as a critical partner in the installer's sales pipeline rather than just another lead vendor. Our hybrid model—a baseline monthly subscription plus performance-based lead fees—aligns our growth directly with the conversion success of our clients.

KEY STRATEGIC TAKEAWAY: *SolarGrid AI transforms solar prospecting from manual guesswork into a data-driven, high-conversion commercial pipeline.*

2. Problem Statement & Market Friction

Commercial solar prospecting is currently plagued by extreme friction: manual satellite assessment, high cost of cold-outreach, and poor lead qualification leading to wasted sales hours. Installers spend weeks evaluating roof feasibility before even making contact with a property manager. This inefficiency creates a major market gap. Most commercial installers lack the in-house technical capacity to perform automated geospatial analysis at scale, resulting in thousands of missed opportunities on rooftops that are structurally perfect but ignored by competitors due to lack of visibility.

KEY STRATEGIC TAKEAWAY: *Inefficient manual prospecting is killing installer ROI; we replace expensive human hours with scalable geospatial intelligence.*

3. Solution & Value Proposition

SolarGrid AI offers a proprietary rooftop assessment platform that computes kilowatt feasibility in seconds. By analyzing orientation, obstruction, and historical energy demand data, we produce a 'Solar Readiness Score' for every lead. Our value proposition is twofold: operational efficiency and sales intelligence. Installers receive a high-intent, qualified lead (complete with estimated system capacity and annual savings reports) that allows them to bypass the initial discovery phase and jump directly to proposal generation. This reduces the sales cycle by 30-40%.

KEY STRATEGIC TAKEAWAY: *We deliver 'Proposal-Ready' leads that shorten sales cycles and increase conversion rates by quantifying ROI before contact.*

4. Target Market & Ideal Customer Profile (ICP)

Our primary ICP consists of mid-market commercial solar EPC (Engineering, Procurement, and Construction) firms with active sales teams of 5-20 representatives. These firms handle installations ranging from 50kW to 500kW and have high customer acquisition costs (CAC). Secondary targets include energy consultancy firms and commercial real estate portfolio managers looking to increase building asset value through solar retrofits. We prioritize firms operating in high-incentive regulatory jurisdictions where the ROI on commercial solar installations is inherently superior.

KEY STRATEGIC TAKEAWAY: *Focusing on mid-market EPCs where high ticket sizes make our lead generation premium highly cost-effective.*

5. Business & Revenue Model (Pricing & Unit Economics)

We utilize a 'SaaS + Pay-Per-Lead' model to maximize recurring revenue while capturing upside from our lead quality. The \$1,500/month SaaS fee covers access to our dashboard and analytics interface, ensuring high platform stickiness. The \$150 per qualified lead fee acts as a performance royalty. This tiered pricing allows us to scale with our clients; as they grow their sales force, they consume more leads, creating a scalable compounding revenue effect. Our unit economics are aggressive: the \$150 lead cost represents less than 0.5% of the \$150k+ average contract value our clients sign.

KEY STRATEGIC TAKEAWAY: *A sticky SaaS platform combined with lead-gen royalties creates a high-margin, scalable revenue engine.*

6. Go-To-Market (GTM) Strategy & Outbound Pipeline

Our GTM strategy focuses on direct, high-touch outbound sales to Sales Directors and CEOs at mid-market EPC firms. We leverage a 'Show, Don't Tell' approach, where our initial outreach includes a sample 'Solar Readiness' report on one of the prospect's previously completed projects. We will use industry-specific events (e.g., RE+ Solar Conferences) for lead acquisition and LinkedIn account-based marketing (ABM) to target regional commercial installers. Once onboarded, our Customer Success team will manage lead volume flow to ensure our clients' sales pipelines remain consistently saturated with high-intent prospects.

KEY STRATEGIC TAKEAWAY: *Direct sales using personalized 'pre-qualified' project reports will drive the highest conversion of potential installation partners.*

7. Competitive Advantage & Strategic Moats

Our strategic moat is built on two pillars: data accuracy and proprietary algorithms. As we analyze more rooftops, our machine learning models improve in predicting solar yield accuracy, creating a feedback loop that competitors cannot replicate without extensive historical data. Additionally, our integration into the installer's existing CRM workflow creates switching costs. By embedding SolarGrid AI into their daily operations, we move from being a 'vendor' to an essential 'operating system' for commercial solar growth. This platform stickiness serves as a defensive barrier against commoditized lead generators.

KEY STRATEGIC TAKEAWAY: *Data-network effects and CRM integration create an insurmountable moat against low-end manual competitors.*

8. Financial Overview & Milestone Projections

Financial strategy is anchored on reaching break-even within the first six months by aggressively scaling our EPC partner base. Stage 1 focuses on market validation with 10 foundation partners. Stage 2 shifts to automated lead generation and regional expansion. Stage 3 focuses on scaling volume and introducing premium tiered lead segments (e.g., enterprise-level industrial accounts). Cash flow will be heavily optimized through annual SaaS subscriptions and performance-based lead billing, providing a healthy cash conversion cycle that allows for continuous reinvestment in drone/satellite data partnerships.

KEY STRATEGIC TAKEAWAY: *Aggressive scaling of the partner base will drive us toward \$2M+ ARR within the first year of operation.*

Strategic Milestones & Financial Projections

Metric	Stage 1 (Mo 1-3)	Stage 2 (Mo 4-6)	Stage 3 (Mo 7-12)
Active SaaS Subscribers	10	35	80
Qualified Leads Sold	40	150	400
Monthly Recurring Revenue (MRR)	\$15,000	\$52,500	\$120,000
Lead Gen Revenue	\$6,000	\$22,500	\$60,000
Total Monthly Revenue	\$21,000	\$75,000	\$180,000
