

SolarGrid AI: Commercial Solar Acquisition Platform

Automated AI-driven commercial solar lead generation and roof feasibility intelligence for elite installers.

1. Executive Summary

SolarGrid AI is a specialized B2B intelligence platform transforming how commercial solar installers acquire high-ticket projects. By integrating computer vision with satellite and drone-derived imagery, we provide an automated pipeline of pre-qualified, investment-grade commercial roof leads. We address the \$150k+ average deal size segment, where precision and technical feasibility are the primary barriers to sale. Our platform operates as a tiered subscription and lead-delivery engine, capturing recurring revenue from installers while monetizing high-intent qualified leads. We position ourselves not just as a lead broker, but as the technical underwriting layer that allows commercial installers to bypass months of manual site auditing and prospecting.

KEY STRATEGIC TAKEAWAY: *SolarGrid AI converts raw overhead imagery into high-intent commercial solar pipelines, bridging the gap between technical potential and sales execution.*

2. Problem Statement & Market Friction

The commercial solar industry is plagued by high customer acquisition costs (CAC) and lengthy, manual site-feasibility studies. Currently, installers waste thousands of labor hours on manual desk audits using dated satellite maps or physical drone visits before knowing if a roof is even viable. This friction forces installers to focus on low-hanging fruit, leaving thousands of prime, multi-kilowatt-capable rooftops ignored. Market friction stems from the lack of standardized, objective data. When installers cannot verify structural suitability or energy offset potential instantly, they risk burning sales reps on prospects that fall through during the engineering phase, leading to churn and long sales cycles in a sector where individual project values routinely exceed \$150,000.

KEY STRATEGIC TAKEAWAY: *Manual site auditing is the primary bottleneck in commercial solar; we solve this by digitizing the feasibility study into an immediate, actionable asset.*

3. Solution & Value Proposition

SolarGrid AI provides a SaaS dashboard that automatically identifies rooftops with optimal orientation, shading profiles, and structural real estate for massive energy offsets. Our core value proposition is the 'Feasibility Score'—a proprietary metric generated by our AI models that predicts exactly how much an installer can realistically close on a specific site. By offering high-intent, pre-vetted leads, we allow installers to focus exclusively on closing. We act as their virtual technical pre-sales team, providing them with the exact data needed for their initial prospect presentation, effectively shortening the typical commercial solar sales cycle by 30-40%.

KEY STRATEGIC TAKEAWAY: *We don't just sell leads; we sell verified 'closing opportunities' pre-loaded with the technical data needed to secure a \$150k contract.*

4. Target Market & Ideal Customer Profile (ICP)

Our ICP consists of mid-market commercial solar EPC firms and solar installers who have already mastered residential scale but are seeking to enter or scale their commercial footprint. These companies generally handle projects from 50kW to 500kW and have established sales teams that are currently struggling with lead quality and pipeline predictability. Secondary targets include energy service companies (ESCOs) and property management firms that lack internal energy engineering teams. These customers are not looking for 'top-of-funnel' noise; they are looking for high-accuracy, data-rich dossiers on specific commercial properties that have high energy consumption and structural readiness.

KEY STRATEGIC TAKEAWAY: *We prioritize high-growth commercial installers who prioritize deal density and technical accuracy over broad, unvetted lead volume.*

5. Business & Revenue Model

Our model combines a steady MRR stream with high-margin transactional upside. We charge \$1,500/month for platform access, which includes the dashboard, CRM integration tools, and project management utilities. Each qualified lead—delivered with a full PDF feasibility report—is charged at \$150. This hybrid approach ensures high retention through the SaaS component, while the pay-per-lead model provides massive scalability as our lead-generation AI improves. With a \$150k+ average contract value (ACV) for our clients, our \$150 lead cost is a negligible and highly attractive customer acquisition cost for our partners.

KEY STRATEGIC TAKEAWAY: *A subscription-led model with high-margin lead upsells ensures predictable recurring income alongside exponential growth.*

6. Go-To-Market (GTM) Strategy & Outbound Pipeline

Our GTM strategy centers on 'Direct-to-EPC' outbound campaigns. We leverage LinkedIn sales intelligence to target solar sales directors, utilizing our own data-backed feasibility reports as a 'free hook' for initial discovery calls. We will demonstrate our tech by presenting an analysis of one high-potential building in the prospect's local territory. Once the relationship is established, we integrate with their existing CRM (e.g., Salesforce, Hubspot) to trigger alerts whenever a high-scoring roof within their specified geographic focus is identified. This makes SolarGrid AI a 'sticky' technical partner rather than a transient marketing service.

KEY STRATEGIC TAKEAWAY: Use a 'Trojan Horse' strategy: provide a free, high-value site analysis to secure the recurring monthly platform subscription.

7. Competitive Advantage & Strategic Moats

Our primary moat is the proprietary nature of our AI training set—specifically, the refinement of our algorithms using granular drone and satellite imagery combined with 'ground-truth' data from real-world successful installations. This feedback loop between closed deals and AI performance creates a fly-wheel effect that is impossible for standard lead-brokers to replicate. Furthermore, we build 'switching costs' by integrating directly into the client's internal sales workflow. By becoming the system of record for their commercial lead pipeline, we ensure that SolarGrid AI is not just a vendor, but an essential component of their business operations, making it extremely difficult for them to move to a competing platform.

KEY STRATEGIC TAKEAWAY: Proprietary feasibility algorithms coupled with deep CRM integration create a permanent moat against traditional lead-generation vendors.

8. Financial Overview & Milestone Projections

Our financial roadmap targets rapid scaling through product-market fit verification in the first quarter, followed by aggressive expansion. By Month 12, the focus shifts to maximizing lead volume while maintaining a low-churn subscription base. Capital allocation will prioritize compute costs for AI training and scaling the outbound sales team. We anticipate reaching cash-flow positivity by Month 8, allowing for self-funded reinvestment into expanded geographic coverage and more sophisticated energy yield forecasting.

KEY STRATEGIC TAKEAWAY: The model transitions from a high-effort prospecting phase to an automated, high-margin revenue engine by the end of the first year.

Strategic Milestones & Financial Projections

Metric	Stage 1 (Mo 1-3)	Stage 2 (Mo 4-6)	Stage 3 (Mo 7-12)
Active Installer Subs	10	40	120
Monthly Recurring Revenue (MRR)	\$15k	\$60k	\$180k
Leads Delivered (Monthly)	50	250	800
Lead Gen Revenue (Monthly)	\$7.5k	\$37.5k	\$120k
Total Monthly Revenue	\$22.5k	\$97.5k	\$300k
